

Practical 11

WAP to implement various Web drivers ?

```
const { Builder, By, Key, util } =  
    require('selenium-webdriver');
```

```
(async function example() {
```

```
    let driver = await new Builder()  
        .forBrowser('firefox').build();
```

```
    try {
```

```
        await driver.get('http://www.google.com');
```

```
        await driver.findElement(By.name('q'))  
            .sendKeys('Selenium', Key.RETURN);
```

```
        await driver.waitUntil(titleContains  
            ('Selenium'), 1000);
```

```
    } finally {
```

```
        await driver.quit();
```

```
    }  
}());
```
