-> from mrjob.job import MRJob

class WordCount(MRJob):

def mapper(self, _, line):

word = line.split()

for word in words:
yield word, 1

def reducer(self, word, counts):

yield word, sum(counts)

if __name__ == "__main__":

wordcount.run()

- input.txt

hello world

hello mrjob

word of mrjob

- steps.txt

library need

pip install build

pip install setuptools

pip install mrjob

And make one input.txt file
inside it keep text like this
